

Ch 01. Introduction

1.1 Data Communication

telecommunication
↳ far.

data communication
↳ exchange of data

network : connected group

4가지 특성

→ delivery, accuracy, timeliness,

Jitter

↳ variation in the packet arrival time

Message의 종류

- Text : 비트패턴 (code라고 부름)으로 표현

ex) ASCII 코드, Unicode

↓
영어 이리
영어 저리

- Numbers

- Images : 픽셀 매트릭스로 표현

- Audio

- Video

Data flow

- Simplex : 한쪽에서만 송신, 한쪽은 수신만
- Half-duplex : 송수신 둘 다 가능하지만 동시에는 불가능
- Full-duplex : 동시에 송수신 가능, 채널이 두개 이상

1.2 Networks

A network is a set of devices connected by communication links

네트워크 평가 기준

- 성능 (처리량, 지연, 반응시간 etc)
- 신뢰성 (실패 확률, 자연재해 대응 etc)
- 보안

물리적 구조

point-to-point

multi-point (multi-drop)

physical topology

1.3. Network Types

- LAN (local-area) : 사무실, 빌딩 등
- MAN (metropolitan area) : 도시를 커버
- WAN (wide-area) : 전세계적인 enterprise network (흔 기업이 보유), 인터넷!

Accessing the Internet

- using telephone networks
- using cable networks
- using wireless networks
- direct connection to the Internet

1.4. The Internet

Protocols and Standards

프로토콜 : 규칙의 집합

- Syntax (문법)
- Semantics (의미)
- Timing (타이밍)

Standards : 프로토콜의 표준
(agreed-upon rules)

Standard Organizations

ex) ISO (International Organization for Standardization), ITU-T, CCITT, ANSI, IEEE, EIA 등.

1.5. Standards and Administration

RFC → 인터넷 프로토콜 문서에 붙는 문서 이름

proposed → draft → Internet Standard
↓
Historic

Requirement levels

- required
- recommended
- elective
- limited use
- not recommended
